

SSD trimming

SSD should be routinely trimmed (TODO: reference).

This can be set up by installing `git:bluelight:scripts/Miscellany/fstrim.sh` as `/usr/local/sbin/fstrim.sh` and creating daily cron job `/etc/cron.daily/fstrim` (root:root 755) to run it:

```
#!/bin/bash

# Blue Light daily cron job
# fstrim.sh can be time consuming so background and delay it
(sleep 300; /usr/local/sbin/fstrim.sh)&
```
