Notification to all logged in X users

broadcast
#!/bin/bash

# Broadcast v1.0
#
# A sleazy, dirty, creepy hack to broadcast a message to every single connected user within an X environment.
# Feel free to enhance and share any enhancement!
# everchere@everchere.com

#Checking the number of parameters given:
if [ $# -ne 3 ]; then echo "Wrong number of parameters:";echo "Usage: $0 TITLE MESSAGE DURATION";exit 1; fi;

#First parameter is the title of the info box
TITLE=$1

#Second parameter is the message to be broadcasted
MSG=$2

#Third parameter is the timeout duration for the Info box.
DURATION=$3

## Null-Initializes the list of ADVertised CLienTs
ADVCLT=""

## Grabs the name of one of the connected users from which to grab a list of connected displays
USERNAME=`w -h | head -1 | cut -d' ' -f1`

## Grabs the list of connected users
USERLIST=`w -h | cut -d' ' -f1 | sort -d -u |grep \[^\root\]`

## Adds :0 to the list of the displays, since it might not be grabbed later if $USERNAME is a Network User.
XAUTHOP=":0 

## Grabs the list of the connected displays from $USERNAME and removes duplicates
XAUTHOP="$XAUTHOP `su $USERNAME -c -l 'xauth list $DISPLAY' | sed 's/.*\(:[0-9]\+\).*/\1/g' | sort -d -u""

## Core Stuff:

# For each Connected display...
for i in $XAUTHOP

do
    # Try to display the message with each user's environment.
    # That's dirty and kind of "brutal", but I couldn't find a way to associate a display to a user in a clean way...
    for j in $USERLIST
        do
            # Try to display for the user only if he was not already advertised.
            if ! (echo "$ADVCLT" | grep $j)
            then
                su $j -c -l "export DISPLAY='localhost${i}'; zenity --info --title='$TITLE' --text='$MSG' --timeout $DURATION"
                if [ $? -eq 5 -o $? -eq 0 ] && ADVCLT="$ADVCLT $j"
            fi
            # Same thing here, for non-network users.
            if ! (echo "$ADVCLT" | grep $j)
            then
                su $j -c -l "export DISPLAY='$i'; zenity --info --title='$TITLE' --text='$MSG' --timeout $DURATION" && ADVCLT="$ADVCLT $j"
                if [ $? -eq 5 -o $? -eq 0 ] && ADVCLT="$ADVCLT $j"
            fi
        done
    done
done
