Notification to all logged in X users

broadcast
#!/bin/bash
# Broadcast v1.0
# A sleazy, dirty, creepy hack to broadcast a message to every single connected user within an X environment.
# Feel free to enhance and share any enhancement!
# everchere@everchere.com

#Checking the number of parameters given:
if [ $# -ne 3 ]; then echo "Wrong number of parameters:";echo "Usage: $0 TITLE MESSAGE DURATION";exit 1; fi;

#First parameter is the title of the info box
TITLE="$1"

#Second parameter is the message to be broadcasted
MSG="$2"

#Third parameter is the timeout duration for the Info box.
DURATION="$3"

## Null-Initializes the list of ADVertised CLienTs
ADVCLT=""

## Grabs the name of one of the connected users from which to grab a list of connected displays
USERNAME=`w -h | head -1 | cut -d' ' -f1`

## Grabs the list of connected users
USERLIST=`w -h | cut -d' ' -f1 | sort -d -u |grep \[^root\]`

## Adds :0 to the list of the displays, since it might not be grabed later if $USERNAME is a Network User.
XAUTHOP=":0 ">

## Grabs the list of the connected displays from $USERNAME and removes duplicates
XAUTHOP="$XAUTHOP 'su $USERNAME -c -l 'xauth list $DISPLAY' | sed 's/>.*/\1/g' \sort -d -u'

## Core Stuff:
# For each Connected display...
for i in $XAUTHOP
  do
    # Try to display the message with each user's environment.
    # That's dirty and kind of "brutal", but I couldn't find a way to associate a display to a user in a clean way...
    for j in $USERLIST
      do
        # Try to display for the user only if he was not already advertised.
        if ! (echo "$ADVCLT" | grep $j)
          then
            su $j -c -l "export DISPLAY='localhost$\{i\}'; zenity --info --title='$TITLE' --text='$MSG' --timeout $DURATION"
        fi
      done
    done

    # Same thing here, for non-network users.
    if ! (echo "$ADVCLT" | grep $j)
      then
        su $j -c -l "export DISPLAY='$\{i\}'; zenity --info --title='$TITLE' --text='$MSG' --timeout $DURATION" & ADVCLT="$ADVCLT $j"
      fi
    done
